Summary of activities (24 Hours)

Drilled 8½" hole from 3600 to 3792m. Took pressure points at 3585.9m, 3648.9m, 3730.9m & 3720.9m. Circulated well clean. POOH wet with 8½" BHA from 3792m to 3542m Attempted to take points at bit/probe depth 3694/3660m, 3677/3643m & 3556/3522m. StetScope did not perform.

Summary of planned activities (24 Hours)

Continue POOH with 8½" BHA. Lay out 8½" BHA. Rig up for RIH with 7" liner. Commence RIH with 7" liner.

Operations

| Start time | End time | End Depth mMD | Main - Sub Activity | State | Remark                                                                                                                                                                                                                                                                                                                                                                                                                |
|------------|----------|---------------|---------------------|-------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 00:00      | 03:15    | 3580          | drilling -- drill   | ok    | Continued to drill 8½" hole from 3500m to 3580m. Drilling parameters: Flow 2100 lpm / SPP 205-209 bars / String RPM 180 / WOB 3-6 MT / TQ 26-28 kNm / ROP 30-50 m/hour / ECD 1.582-1.604 SG / MUD weight 1.45 SG. Took survey after every connection. Down linked tool. Held tool box talk as drilling ahead prior taking pressure points. Parallel operation: Made up 7" liner in stands and racked back in derrick. |
| 03:15      | 04:00    | 3566          | drilling -- survey  | ok    | Evaluated where to take pressure points. Down linked the StethoScop. Meanwhile reamed single between 3580 and 3566m in preparation for taking pressure point. 2100 lpm, 80 to 120 rpm. Downlinked to set tool (Stethoscope) to standby.                                                                                                                                                                               |
| 04:00      | 05:00    | 3565.5        | drilling -- survey  | ok    | Send down link to set tool and took pressure point reading: Bit depth 3565.5m, test depth 3530m.                                                                                                                                                                                                                                                                                                                      |
| 05:00      | 06:00    | 3600          | drilling -- drill   | ok    | Continued to drill 8½" hole from 3580m to 3600m. Drilling parameters: Flow 2100 lpm / SPP 210 bars / String RPM 180 / WOB 5 MT / TQ 26-28 kNm / ROP 16-42 m/hour / ECD 1.594 SG / MUD weight 1.45 SG. Took survey after connection. Parallel operation: Made up 7" liner in stands and racked back in derrick. Total 27 stds in derrick.                                                                              |
| 06:00      | 07:15    | 3620          | drilling -- drill   | ok    | Continued to drill 8½" hole from 3600m to 3620m. Drilling parameters: Flow 2100 lpm / SPP 212 bars / String RPM 130-180 / WOB 5-11 MT / TQ 25-30 kNm / ROP 40-50 m/hour / ECD 1.584-1.601 SG / MUD weight 1.45 SG. Took survey after connection. Down linked tool. Stringer uncounted at 3593m                                                                                                                        |
| 07:15      | 08:30    | 3585.9        | drilling -- survey  | ok    | Send down link to set tool and took pressure point reading: Bit depth 3585.9m, test depth 3551m.                                                                                                                                                                                                                                                                                                                      |
| 08:30      | 10:15    | 3661          | drilling -- drill   | ok    | Continued to drill 8½" hole from 3620m to 3661m. Drilling parameters: Flow 2100 lpm / SPP 212 bars / String RPM 130 / WOB 5-11 MT / TQ 25-30 kNm / ROP 40-50 m/hour / ECD 1.584-1.601 SG / MUD weight 1.45 SG. Took survey after connection. Down linked tool.                                                                                                                                                        |
| 10:15      | 10:30    | 3661          | drilling -- drill   | ok    | Unexplained gain. Lined up on trip tank & observed well, well static                                                                                                                                                                                                                                                                                                                                                  |
| 10:30      | 11:30    | 3648.9        | drilling -- survey  | ok    | Send down link to set tool and took pressure point reading: Bit depth 3648.9m, test depth 3624m.                                                                                                                                                                                                                                                                                                                      |
| 11:30      | 16:15    | 3742          | drilling -- drill   | ok    | Continued to drill 8½" hole from 3661m to 3742m. Drilling parameters: Flow 2100 lpm / SPP 206 bars / String RPM 130 / WOB 4-11 MT / TQ 19-30 kNm / ROP 4-40 m/hour / ECD 1.585-1.612 SG / MUD weight 1.45 SG. Took survey after every connection. Down linked tool. Slow drilling from 3712.8m to 3720m.                                                                                                              |
| 16:15      | 17:45    | 3742          | drilling -- survey  | ok    | Send down link to set tool and took pressure point reading: Bit depth 3730.9m, test depth 3706m. Bit depth 3720.9m, test depth 3696m.                                                                                                                                                                                                                                                                                 |
| 17:45      | 22:00    | 3792          | drilling -- drill   | ok    | Continued to drill 8½" hole from 3742m to 3792m. Drilling parameters: Flow 2100 lpm / SPP 206 bars / String RPM 130 / WOB 4-11 MT / TQ 19-30 kNm / ROP 4-40 m/hour / ECD 1.585-1.612 SG / MUD weight 1.45 SG. Took survey after connection. Down linked tool.                                                                                                                                                         |
| 22:00      | 22:45    | 3792          | drilling -- other   | ok    | Circulated cuttings clear of BHA, racked back one stand.                                                                                                                                                                                                                                                                                                                                                              |
| 22:45      | 00:00    | 3783          | drilling -- other   | ok    | Circulated well clean while reciprocating the string. Circulation parameter: Flow 2100 lpm / SPP 190 bars / String RPM 120 / MUD weight 1.45 SG. Circulated a total of 3 bottoms up.                                                                                                                                                                                                                                  |
